Research Experience

Research Associate, Computational Optimisation **Imperial College London**
Department of Civil and Environmental Engineering *April 2018–present*

- Fundamental research into tailored optimisation algorithms to solve large scale single and multi-objective mixed-integer non-linear problems for optimal design and operation of water systems;
- Development of optimisation tools for optimal network design, control, model identification, and fault estimation in water systems;
- Technical supervision of 5 PhD students working on different optimisation and water engineering problems;
- Research resulted in 8 publications in peer-reviewed scientific journals;
- Responsible for writing reports and presenting research results to industrial funders and partners;
- Participation in conferences in water engineering, optimisation, and control.

Qualifications

PhD in Computational Optimisation **Imperial College London**
Department of Civil and Environmental Engineering *2014–2018*
Thesis: Optimal design-for-control of water supply networks by mixed integer programming

- Novel tailored global optimisation methods to solve mixed integer nonlinear programs for optimal design-for-control of water distribution networks;
- Application of mathematical optimisation methods to multi-objective optimal design-for-control problems in water distribution networks;
- Research resulted in 5 publications in peer-reviewed scientific journals.

MSc in Mathematics **Universita' degli studi di Padova**
Department of Mathematics *2011–2014*
Emphasis on PDEs, stochastic analysis, applied linear algebra, computational methods.
Thesis: Hierarchical Stratifications of Pareto Sets

BSc in Mathematics **Universita' degli studi di Padova**
Department of Mathematics *2008–2011*

Teaching Experience

Lecturing and tutorials **Imperial College London**
Department of Civil and Environmental Engineering *2014-present*

- Lectures for BSc modules on convex optimisation with applications in optimal reservoir control, and parameter estimation in water distribution networks (approx. 30 students).
- Tutorials on applications of convex optimisation to problems in image in-painting, optimal control, machine learning, and hydraulic model calibration.
- Lectures and tutorials for MSc modules on modelling and optimisation of water distribution networks (approx. 30 students).
- Small-group tutorials on mathematics for MSc students, with focus on linear algebra and calculus;
- Graduate Teaching Assistant for MSc modules in Hydroinformatics and Water distribution and Distribution (approx. 80 students).

Supervision **Imperial College London**
Department of Civil and Environmental Engineering *2014-present*

- Technical supervision of 5 PhD students working on optimal design, model identification and fault estimation problems for water distribution networks.
- Co-supervision of 4 final year MSc projects on analysis and optimisation of water distribution networks, all of which have received distinction or merit.
