Dr Filippo Pecci

fp0820@princeton.edu • filippopecci.github.io

Research Experience

Associate Research Scholar — **Princeton University**
Andlinger Center for Energy and the Environment — *2022–present*

- Working at ZERO Lab on optimization methods for capacity expansion models of Macro-Energy Systems

Research Associate, Computational optimization — **Imperial College London**
Department of Civil and Environmental Engineering — *2018–2022*

- Fundamental research into tailored optimization algorithms to solve large scale single and multi-objective mixed-integer non-linear problems for optimal design and operation of water systems;

Qualifications

PhD in Computational optimization — **Imperial College London**
Department of Civil and Environmental Engineering — *2014–2018*
Thesis: Optimal design-for-control of water supply networks by mixed integer programming

- Modelling and analysis of large scale water distribution networks;
- Novel tailored global optimization methods to solve mixed integer nonlinear programs for optimal design-for-control of water distribution networks;
- Application of mathematical optimization methods to multi-objective optimal design-for-control problems in water distribution networks;

MSc in Mathematics — **Universita' degli studi di Padova**
Department of Mathematics — *2011–2014*
Emphasis on PDEs, stochastic analysis, applied linear algebra, computational methods.
Thesis: Hierarchical Stratifications of Pareto Sets

BSc in Mathematics — **Universita' degli studi di Padova**
Department of Mathematics — *2008–2011*

Teaching Experience

Lecturing and tutorials — **Imperial College London**
Department of Civil and Environmental Engineering — *2014-present*

- Lectures for BSc modules on convex optimization with applications in optimal reservoir control, and parameter estimation in water distribution networks.
- Tutorials on applications of convex optimization to problems in image in-painting, optimal control, machine learning, and hydraulic model calibration.
- Lectures and tutorials for MSc modules on modelling and optimization of water distribution networks.
- Small-group tutorials on mathematics for MSc students, with focus on linear algebra and calculus;
- Graduate Teaching Assistant for MSc modules in Hydroinformatics and Water distribution and Distribution.

Supervision — **Imperial College London**
Department of Civil and Environmental Engineering — *2014-present*

- Technical supervision of 5 PhD students working on optimal design, model identification and fault estimation problems for water distribution networks.
- Co-supervision of 4 final year MSc projects on analysis and optimization of water distribution networks.

Publications

Peer-reviewed journal articles
